IJERA Journal

ijera.ad@gmail.com

Dear Researcher,

International Journal of Engineering Research and Applications is ISO 3297:2007 certified open access and peer reviewed refereed international Journal.

IJERA invites articles that illustrate research results, projects, surveying works and industrial experiences that describe significant advances in the areas of Engineering, Technology, Science and Mathematics.

INDEXING: NASA Ads, ArXiv, ANED (American National Engineering Database), EBSCOHost, Cabell's Directory, DOAJ, NCBI (US National Library) etc.

About the Journal

Journal of Chronic Diseases and Management is a multidisciplinary journal that publishes papers of the highest quality and significance journal for Chronic Diseases & Therapy.

As a part JSciMed Central® Open Access platform, Journal of Chronic Diseases and Management supports the scientific innovation and advancement in high-quality papers documenting recent advances and new developments in all fields, in different areas of chronic diseases and therapies, in both experimental and clinical research community by increasing access to peer reviewed scientific literature.

JSciMed Central® also brings multiple internationally peer reviewed member journals under one roof thereby encouraging knowledge sharing, collaboration and promotion of interdisciplinary science.

The purpose of the journal is to provide a platform for the publication of high-quality papers documenting recent advances and new developments in all fields of Allergy, Obesity and Overweight, Asthma, Cancer, Dynamic treatment regimes, Chronic medicine, Blindness, Chronic treatment, Blood Pressure, Cardiovascular diseases, Chronic hepatitis, Chronic pain syndromes, Renal diseases, Chronic respiratory diseases, Diabetes mellitus in both experimental and clinical stages. It also includes recent advances that improve the understanding of disease and the safe and effective treatment of patients.

Clarivate Discontinues *IJERPH* and *JRFM* Coverage in Web of Science

On March 15, 2023, we received note that Clarivate has discontinued coverage of *IJERPH* and *JRFM* in Web of Science as of 13 and 22 February respectively. Clarivate found that both journals failed the **Content Relevance criterion**, highlighting publications that were deemed outside the scope of the journal, and not to do with quality of the publications. On 31 March 2023, we formally appealed the decision to discontinue *IJERPH* in Web of Science.

Clarivate periodically evaluates journals indexed in their **collections**, and any journals that no longer meet their criteria are removed from coverage. Unfortunately, publishers are not informed about the evaluation process until its completion.

About Conference

After the successful completion of **Mental Health 2022**, We cordially invite you all to attend the “3rd International Conference on **Psychology** and **Mental Health**” on **November 16-17, 2023** at **Dubai, UAE**. It mainly focuses on Psychology and Mental Health with the theme of “**A forum to explore the innovation in Psychology and Mental Health**”. Mental Health 2023 will be a great forum to explore and share the knowledge.

Our main goal is to make the congress an unique achievement by the best psychiatrists and psychologists in the field of exclusive debate and discussion. The conference will feature thought-provoking symposia, seminars, and keynote workshops led by renowned professionals in the field. It will also prove to be a fantastic opportunity for university and institute representatives to work with internationally renowned academics and for businesses looking to expand their worldwide business reach.

Target Audience:

Target audience are Psychologist, Mental Health Psychiatrist, Psychiatrist, Students, Educators, Research Scholars,

Predatory Conferences

Predatory conferences (sometimes referred to as bogus / fake conferences or predatory meetings) pretend to be legitimate scientific conferences, but their purpose is to profit from registration fees **without any qualitative contribution** to the scientific community. This unfair practice often abuses the need to participate in international conferences of beginning scientists.

Predatory conferences take two forms:

1. The conference **does not take place** at all
 - The conference is announced on its website and often by unsolicited e-mails, but after paying the registration fee, all communication ends and the event never takes place.
2. The conference **takes place, but in inadequate quality**
 - The event actually takes place, however, its quality does not meet well-established standards. It is often accompanied by a weak organization, changes in the programme, missing presenters and too general presentations without a logical connection between them.

<https://openscience.cuni.cz/OSCIEN-37.html> (13.05.2023)

Identifying Predatory Conferences

There are a number of ways to identify predatory conferences. Identifying these conferences is important for you as a researcher and for others in the [academic publishing](#) field.

- Is the conference included in the list of known predatory conferences?
- However, do not assume a conference as not being predatory if it does not show up in the list.
- Did professional societies and other well-established organizations organize this conference? Be wary of organizations with overly generic names and avoid extremely large conferences that combine various fields into one conference.
- Are there various options to contact the conference organizers? Most legitimate organizations do not use free email accounts and have websites with “.edu” addresses.
- How long does it take for the acceptance of the paper? Most predatory conferences promise a quick turnaround time for papers to lure in unsuspecting academics.
- Does the conference have awards for researchers and papers? Be wary of conferences that promise a large number of rewards.
- Do the conference organizers promise paper publication? Most legitimate conferences do not guarantee publication.
- Is there a geographic variety in terms of the editorial board? If all editors came from the same place, then this could be a sign of a predatory conference.
- Do the editors have any academic information presented about themselves?
- Is there evidence to suggest that the review members or editors are not educationally qualified to conduct the peer review process?

Why do specialists in electromagnetism and OSH need altmetric indicators ...

By: Sygocki, W (Sygocki, Witold) [1]; Korzeniewska, E (Korzeniewska, Ewa) [2]

View Web of Science ResearcherID and ORCID (provided by Clarivate)

PRZEGLAD ELEKTROTECHNICZNY

Document Type: Article

Abstract:

Altmetric indicators for several years have been more and more often seen on publishing platforms and websites, as well as in bibliographic databases - e.g. in the Scopus database. These indicators are an element of scientific communication and although they may raise doubts and questions: are they reliable, what do they really serve, what do they inform about, and whether everyone should know and use them, e.g. by tweeting, posting information about publications at the ResearchGate website. Currently many publishers (Taylor & Francis included) offer information about altmetric and bibliometric indices, i.e. citations in WoS CC, Scopus. The article presents systematized information on these indicators together with examples of the reasons for their occurrence, also among specialists conducting research in the field of electromagnetism and occupational health and safety. Even if they are wondering what the next metrics are for and how they can be helpful. (Why do specialists in electromagnetism and OSH need altmetric indicators...).

nr katalogowy: 141233

10.15199/48.2022.12.77

Streszczenie

Artykuł dotyczy zagadnień ewaluacji pracowników naukowych. Prace związane z oceną dorobku nabierają szczególnego znaczenia zwłaszcza w okresie tuż przed ewaluacją instytucji. Deponowanie danych publikacyjnych odbywa się w systemach mających służyć ewaluacji w Polsce: system POL-on (baza PBN). Zaprezentowane aspekty ewaluacji są związane z pierwszym kryterium tj. publikacyjnym (kryterium 1). Dla nauk inżynieryjnych wkład wynosi 50%. Ocena odbywała się w ramach dyscyplin/ny deklarowanej przez pracowników poszczególnych jednostek. Publikowanie wyników prac badawczych jest obowiązkiem każdej osoby zatrudnionej na etacie badawczym, czy też badawczo dydaktycznym. Zaprezentowane przykłady związane są z oceną dorobku publikacyjnego z zakresu BHP i szeroko pojętej inżynierii elektrycznej. Czasopisma przywoływane w artykule mają przypisane dyscypliny inżynieryjne, w tym inżynierię środowiska, górnictwo i energetykę.

Abstract

The article presents the issues of evaluation of researchers in Poland. The work related to the evaluation of the achievements of the achievements becomes particularly important, especially in the period just before the evaluation of the institution. Depositing of publication data takes place in the systems intended for evaluation in Poland: POL-on (PBN). The presented aspects of evaluation are related to the first criterion, i.e. the publication (criterion 1). For engineering sciences, the contribution is 50%. The assessment took place within the discipline/s declared by the employees of individual units. Publishing the results of research work is the responsibility of every person employed in a research or research and teaching position. The article presents examples related to the assessment of the publications in the field of occupational health and safety and broadly understood electrical engineering. The journals in the article are assigned engineering disciplines, including environmental engineering, mining and energy

The assessment took place within the discipline/s declared by the employees of individual units. Publishing the results of research work is the responsibility of every person employed in a research or research and teaching position. The article presents examples related to the assessment of the publications in the field of occupational health and safety and broadly understood electrical engineering. The journals in the article are assigned engineering disciplines, including environmental engineering, mining and energy.
Keywords: evaluation, evaluation of scientific achievements, science communication, POL-on, SEDN, PBN, engineering disciplines, publishing activity

Introduction

Evaluation of the scientific achievements takes place cyclically in the scientific institutions within the frames of the assessment of scientific achievements of the researcher. In the all-national scale, the evaluation of the achievements in period of 2017–2021 was performed in 2022. For the first time, the evaluation of scientific establishments was carried out within the frames of scientific disciplines and included publication activity, impact on the society and financial issues. It has been adopted for the needs of the present paper that the publication aspect is most important for the persons who are conducting the studies. The mentioned aspect induced many emotions, mainly due to

Streszczenie: Artykuł dotyczy zagadnień ewaluacji pracowników naukowych. Prace związane z oceną dorobku nabierają szczególnego znaczenia zwłaszcza w okresie tuż przed ewaluacją instytucji. Depozytowanie danych publikacyjnych odbywa się w systemach mających służyć ewaluacji w Polsce: system POL-on (baza PBN). Zaprezentowane aspekty ewaluacji są związane z pierwszym kryterium tj. publikacyjnym (kryterium 1). Dla nauk inżynieryjnych wkład wynosi 50%. Ocena odbywała się w ramach dyscyplin/ny deklarowanej przez pracowników poszczególnych jednostek. Publikowanie wyników prac badawczych jest obowiązkiem każdej osoby zatrudnionej na etacie badawczym, czy też badawczo dydaktycznym. Zaprezentowane przykłady związane są z oceną dorobku publikacyjnego z zakresu BHP i szeroko pojętej inżynierii elektrycznej. Czasopisma przywoływane w artykule mają przypisaną dyscyplinę inżynieryjną, w tym inżynierię środowiska, górnictwo i energetykę.
Słowa kluczowe: ewaluacja, ocena dorobku naukowego, komunikacja naukowa, POL-on, SEDN, PBN, dyscypliny inżynieryjne, aktywność publikacyjna

evaluation. In the case of Criterion II – financial effects of the research and developmental work – 35%, a Criterion III – the effect of scientific activity on functioning of the society and economy (expert assessment) gave 15%.

Evaluation in 2022

For the first time, in the assessment, there were considered the publication slots (slot – a measure of the single author's participation in a given work) of the authors (formal limitation is maximum 4 slots per one person) where one slot corresponded to a single-author publication (100%), or participation in the publications of many authors. The definition "publication

Abstract. The article presents the issues of evaluation of researchers in Poland. The work related to the evaluation of the achievements of the achievements becomes particularly important, especially in the period just before the evaluation of the institution. Depositing of publication data takes place in the systems intended for evaluation in Poland: POL-on (PBN). The presented aspects of evaluation are related to the first criterion, i.e. the publication (criterion 1). For engineering sciences, the contribution is 50%. The assessment took place within the discipline/s declared by the employees of individual units. Publishing the results of research work is the responsibility of every person employed in a research or research and teaching position. The article presents examples related to the assessment of the publications in the field of occupational health and safety and broadly understood electrical engineering. The journals in the article are assigned engineering disciplines, including environmental engineering, mining and energy. **(Evaluation forever - examples of publications in engineering disciplines)**
